

Gorgeous Design with High Performance Engine Light Weight Technology for Dynamic Handling Character

The K50 Concept is designed with a futuristic appearance that makes use of purple, blue and black metal finishes. The aggressive facial and sharp streamlined body panels aim to achieve both efficient aerodynamics and visual excitements. With its carefully sculpted windshield, surrounding fairing, and spoiler, the K50 Concept has low drag at high speed. The headlight of the K50 Concept consists of five pentagons in the shape of eagle eyes, creating a unique visual identity and aggressive stance. The V-shape LED light guide and LED taillight give the K50 Concept the high-tech and modern appearance that shine brightly in the dark. The outlook of K50 Concept gives hints to “The Thrills of Touring” even before the start of the journey.

The two-cylinder engine of the K50 Concept is designed to deliver both smooth and strong output. Its twin power mode selection gives the riders the optimal acceleration characters suitable for different occasions. The exhaust sound of the K50 Concept is specifically tuned to be both throaty and intoxicating. With an aluminum body structure, the K50 Concept guarantees light weight and high rigidity. The advanced rear suspension is designed to provide not only the comfort for touring but also the capability to handle every turn at speed. While the seat height is lowered to accommodate different sizes of riders, the underseat storage space remains capable of fitting two helmets. The K50 Concept defines the “The Thrills of Touring” with its outstanding performance capability.
